## Food security – an evolving concept

- ⇒ In the 50s and 60s:  
Food security = self sufficiency in major staples
- ⇒ After World Food Conference of 1974:  
Food Security = Access to sufficient food
- ⇒ Situations that exists when all people, at all times, have physical, social and economic access to sufficient, safe and nutritious food that meets their dietary needs and food preferences for an active and healthy life  
- World Food Summit of 1996

### Context 1 : Increasing populations

**Census of India**  
Office of the Registrar General & Census Commissioner, India

Census Data 2001 >> India at a glance >> Population Since 1901

Variation in population since 1901

Year	Total	Rural	Urban
1901	238,396,327	212,544,454	25,851,873
1911	252,093,390	226,151,757	25,941,633
1921	251,321,213	223,235,043	28,086,170
1931	278,977,238	245,521,249	33,455,989
1941	318,660,580	274,507,283	44,153,297
1951	361,088,090	298,644,381	62,443,709
1961	439,234,771	360,298,168	78,936,603
1971	548,159,652	439,045,675	109,113,977
1981	683,329,097	523,866,550	159,462,547
1991	846,302,688	628,691,676	217,611,012
2001*	1,028,737,436	742,490,639	286,119,689

Comparative population Growth Rate

Context 2 : Urbanisation

Source : CIA World Fact Book, 2009

### Context 3: Increased demand for food

- Increase in Population
- Increase in income levels
- Increased meat consumption
  - But 1 kg poultry meat = 1.75 kg grain as feed
- Increase in Feed requirement

### Context 4: Limited land areas

#### Decline in total cultivable land

1980-81 : 185.09 M ha

2005-06 : 182.57 M ha

#### Land converted to non agricultural uses

Increased area under non food crops Eg : Biofuels

### Context 5 : Prone to Hazards

- Floods and Droughts
  - Cyclones and Storms
  - Tsunami
  - Heat and Cold waves
  - Earthquakes
- 
- Food production losses
  - Infrastructure damage
  - Asset losses
  - Increased livelihood risks
  - More food emergencies
  - Health risks

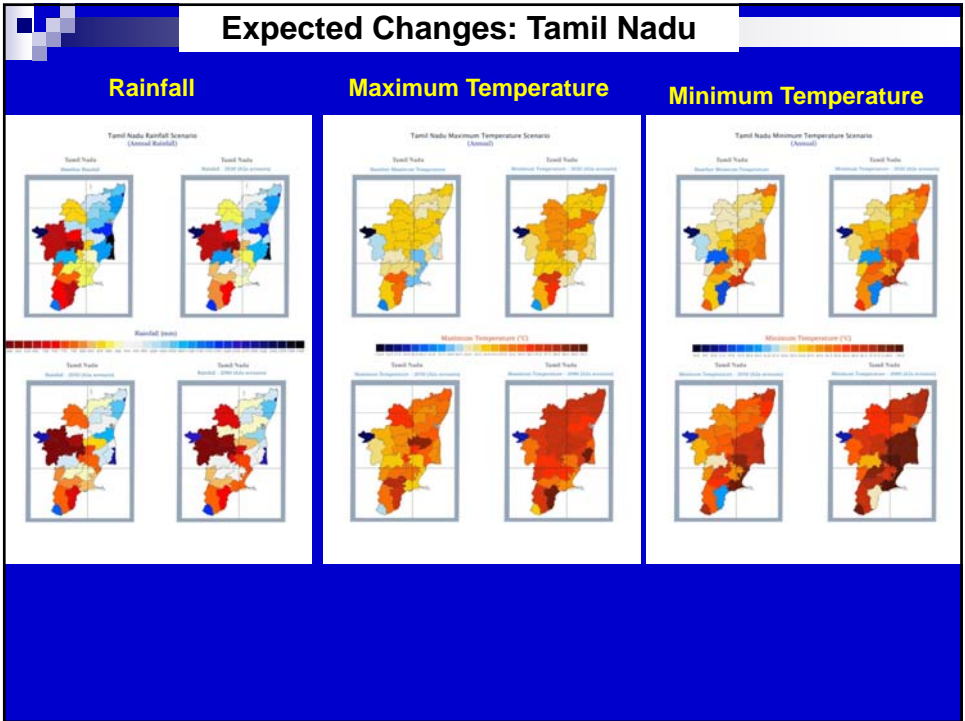

## Context 6 : Climate Change

### Drivers

- Demographic
- Economic
- Technical
- Social
- Political
- Cultural

### Observed Changes

- Increase in GHG
- Global warming
- Change in precipitation
- Glacier Melt
- Sea level rise
- Extreme events

## Possible effect of Climate Change on Agriculture

CO<sub>2</sub> fertilization effect + Increase in Temperature

Change in crop water requirement + Increasing glacier melt - availability of irrigation

Fertilizer Use Efficiency + Green House Gas emission

Latitudinal effect + Food Price, Trade and Food security

Population dynamics of pest and disease

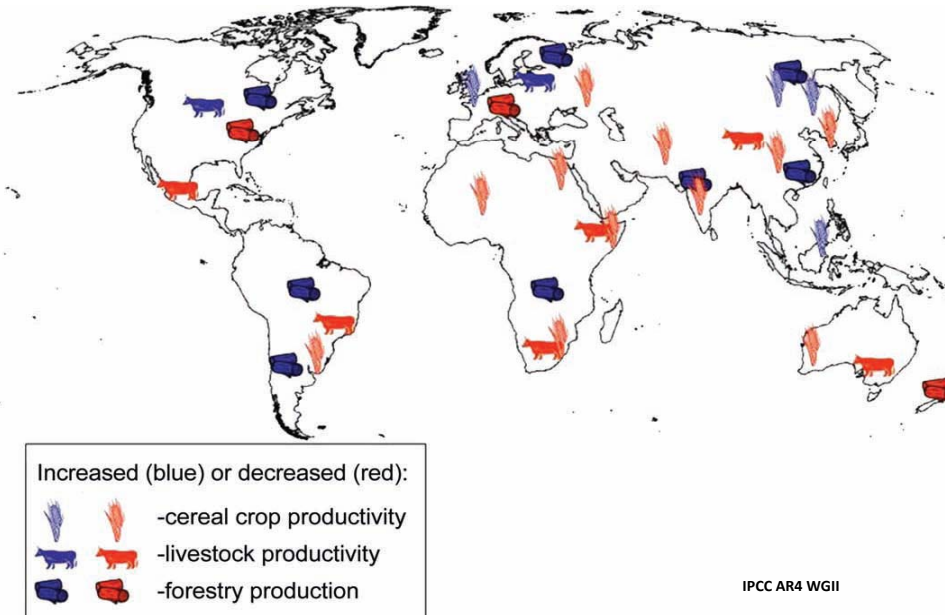

Extreme weather events

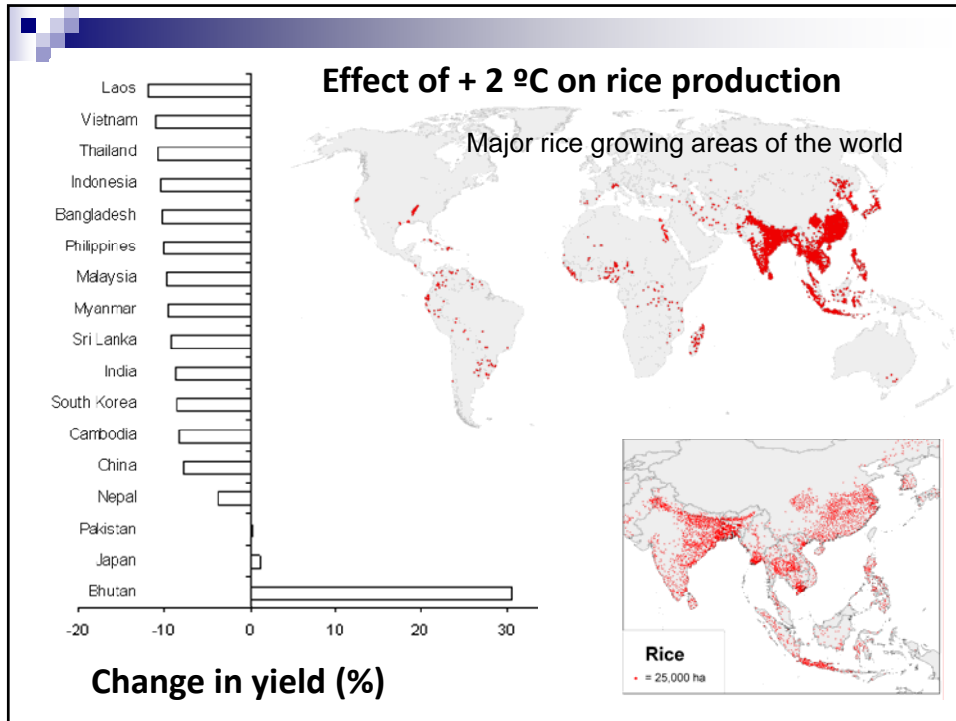

Quality of Agricultural Produces

Fluctuation in food production

Storage, transport and Marketing

## CC Impacts on crop, livestock and forest production

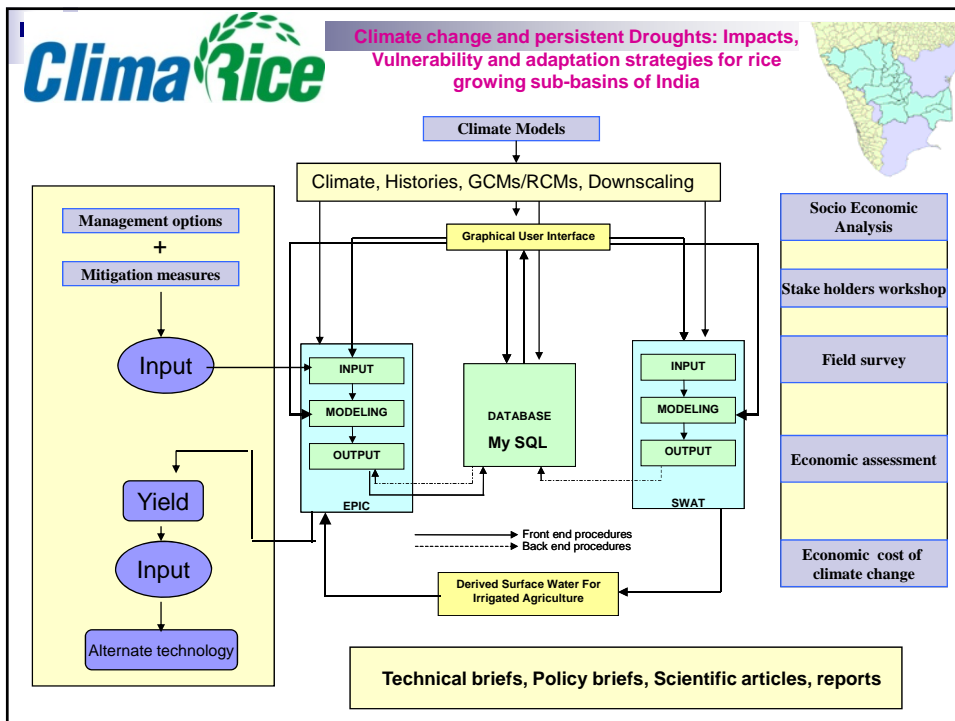

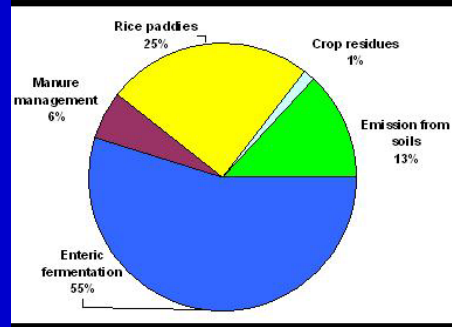

## Contribution of Indian Agriculture to Global Warming

Agriculture sector contributes 28% of the total GHG emissions from India (as per the data of 1994; MOEF).

The emissions from Indian agriculture are likely to increase significantly in future

Increased temperatures would lead to higher emissions even at the current level of fertilizer consumption.

## Adaptation options – Farmers opinion

## Shifting of sowing window

### Early Sowing

### Normal Sowing

### Late Sowing

## Changing the system of cultivation

Rainfall : 871 mm    ET : 709 mm    PET : 1828 mm

21    Number of Irrigations given    28  
 1220    Quantum of water used    920  
 - 0 -    Saving of irrigation water    300

	Flooded	SRI
Area under Rice crop in ha (56 % of 3246.4 sq.km)	1817984	1817984
Total water required for irrigation under flooded cultivation (mm)	2217940480	1672545280
Total water saved in the basin (mm)	-	545395200
Additional area that can be brought to Rice (ha)	447045	592821

Total Quantum of water used for irrigation (mm)	740	1020
Saving in irrigation water / ha	280	-
Yield	2401	3282
Yield advantage	-	1831

# Mitigation measures . . .

## Mitigation options for GHG emission from Paddy field soils

### Methane

- **Modification of irrigation pattern**
- **Management of organic inputs**
- **Change of crop establishment technique**
- **Change of fertilizer management**
- **Use of suitable crop cultivars**

## Mitigation of methane emission

**More methane**

**Aerobic rice**  
**Less methane**

**Direct seeded rice**  
**Less methane**

**Bed-planted rice**

## Organic Input Management

**Fermented manure (Biogas plant)**

**Timing of manure incorporation**

**Global warming mitigation potential of biogas plants in India**

**Abstract** Biogas technology, besides supplying energy and manure, provides an excellent opportunity for mitigation of greenhouse gas (GHG) emission and reducing global warming through sustainable measures for growing, harvesting, use, lighting and cooking and chemical fertilizers. A study was undertaken to estimate: (1) global warming mitigation potential (GMP) and thereby saving carbon credit of a family size biogas plant in India, (2) GMP of the existing and target biogas plants in the country and (3) atmospheric pollution reduction by a family size biogas plant. The GMP of a family size biogas plant was 8.7 t CO<sub>2</sub> eq. year<sup>-1</sup> and with the current price of US \$10 t<sup>-1</sup> CO<sub>2</sub> eq., carbon credit of US \$87 year<sup>-1</sup> could be earned from each reduction in greenhouse gas emission under the clean development mechanism (CDM). A family size biogas plant substitution 10 t of kerosene, 5.575 kg insecticide and 500 g urea saving cost of INR 14.6, 11.5, 98.7 and 49.7 kg year<sup>-1</sup>, respectively. Potentially 1.42 million biogas plants are operating in the country, which can mitigate global warming by 12 Mt CO<sub>2</sub> eq. year<sup>-1</sup>. Government of India has a target of installing 13.34 million biogas plants by 2012. This target has a GMP of 120 Mt CO<sub>2</sub> eq. year<sup>-1</sup> and US \$1.137 million in carbon credit under the CDM. However, if all the available cattle dung (229 Mt) produced in the country is used, 91.2 million family size biogas plants can be supported which will have a GMP of 406 Mt of CO<sub>2</sub> eq. year<sup>-1</sup> and can save US \$420 million in carbon credit. The reduction in global warming, should economic policy reduces to promote biogas technology to sustain climate change and integration of organic resources will help the farmers to develop biogas as a profitable activity.

## Brown Manuring

Co-culturing of *sesbania* with rice for 25-30 days and then knocking down with 2,4-D ester

## Water Saving Technologies

Laser land leveling

Raised bed planting

## Mitigation options for GHG emission from agricultural soils

### Nitrous oxide

- Improving N fertilizer management
- Optimizing irrigation practices
- Optimizing tillage operations
- Managing organic inputs

## Fertilizer Management

- Nitrification inhibitors
- Sulphate containing fertilizers

Leaf colour chart

Urea tablet

## Mitigation options for GHG emission from agricultural soils

### Carbon dioxide

- Conservation agriculture
- Cover crop, crop rotations, diversification
- Judicious use of off-farm input
- Integrated crop management
- Integrating trees and livestock with crop
- Drip, furrow or sub-surface irrigation
- Conservation/restoration of degraded soils

## Implementation of Mitigation Options

- Cost effectiveness
- Maintained or enhanced production
- Resource availability of the farmers
- National and international policy environment

**TNAU**

**“Humanity is conducting an unintended, uncontrolled, globally pervasive experiment whose ultimate aim is to contain Global Warming”**

**TNAU**

**Mahatma Gandhi said that “There are people in the world so hungry, that God cannot appear to them except in the form of bread”**

**Those least able to cope and least responsible for Global Warming are the most affected**

TNAU

**Theodore Roosevelt**, America's 26th President and a dedicated conservationist, said:

*"The nation behaves well if it treats the natural resources as assets which it must turn over to the next generation increased, and not impaired in value."*

The science that we do, we research, allows us to clean our air, improve our health, and leave our planet a better place for our children.
